## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1, 6 and 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Dent (6,084,865).

As per claim 1, see figures 2, 5, 7, 8 and 13 and col. 5, line 10 to col. 6, line 4, col. 12, line 14 to col. 13, line 37, col. 18, line 35 to col. 19, line 53, and col. 21, line 54 to col. 22, line 27, Dent discloses a method comprising:

Art Unit: 2631

step (see col. 13, lines 15-36) of puncturing sequences of frame synchronization words (SYNC WORD) (see figures 1 and 5) to be transmitted over one frame on a plurality of slots;

step (112) (see figure 7) of receiving a series of codes of the punctured frame synchronization words;

step (SYNC CORRELATION) (see figure 8) of restoring the frame synchronization words in frames by using correlation of the received series of codes; and

step (134, 305, 304) (see figure 13) of obtaining a frame synchronization with respect to a channel by using correlation of the restored frame synchronization words for obtaining SACCH or FACCH messages (see figure 8) which, in turn, is used for the frame synchronization (see also figure 13).

As per claims 6 and 8, Dent discloses that the correlation uses an autocorrelation function and cross correlation function of the frame synchronization words (see col. 19, line 29-37).

#### ***Allowable Subject Matter***

4. Claims 2-5, 7 and 9-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
